

Healthcare on the Go: Virtual Care

From choosing a provider to a virtual consultation, learn how healthcare providers are utilizing technology to connect with patients and remove barriers.

Event Components:

This pre-recorded event takes a look into the world of virtual healthcare. Industry professionals give an insight into how virtual healthcare has evolved, how they use it in their practice, and the advantages of virtual tools.

Service Area:

Health Sciences

Audience:

Students

State Standards Covered:

Health Sciences:

- *3.1.5 Explain the impact of emerging issues such as technology, epidemiology, bioethics, and socioeconomics on healthcare delivery systems*

For Educators & Students:

Pre-Event Questions to Consider

- What is telehealth or telemedicine? Why is telehealth important to the future of healthcare?
- What are the benefits of virtual visits? What are the challenges of virtual visits?
- Is care given by a family physician or someone else?
- How does a virtual appointment work?
- What devices or equipment does someone need in order to access virtual care?
- Is a virtual visit reliable? Will insurance cover a virtual visit?
- What conditions can someone be treated for via telehealth?
- Can a doctor diagnose a patient without actually doing a physical exam?

Post-Event Questions to Consider

- Do virtual visits meet all customers' needs?
- How much will virtual medicine change our current healthcare system?
- Does telemedicine improve the patient experience?
- Will patients be turned off by the "hands off" telemedicine approach?
- What are your thoughts about telehealth or telemedicine?
- What do you predict telehealth will look like in 5 years/10 years?
